

Additional information for Anthony Ho and Michael Baumer

Number of late days used: 0

Contributions of team members:

Both: implementation of framework/architectures (pair coded), writing of final report (simultaneously using Overleaf)

Michael: management of Azure experiments

Anthony: visualizations of attention weights

Interactive notebook for prediction and visualizing sentences:

We have implemented an interactive notebook for predicting the labels of any user-input sentences and visualizing its attention weights using final model. Since we can't upload the model weights to gradescope (weights > 2GB), we will be demoing the interactive notebook in the poster session.
